THE AI BACK OFFICE FOR WHOLESALE

Wholesale runs on WhatsApp. Now it runs on AI.

It takes orders by voice in any dialect, reads supplier lists, makes catalogue posters, and predicts what will sell, what will run out and who will buy next.

GET IT ON Google Play

Download on the App Store

01 / HOW WHOLESALE WORKS TODAY

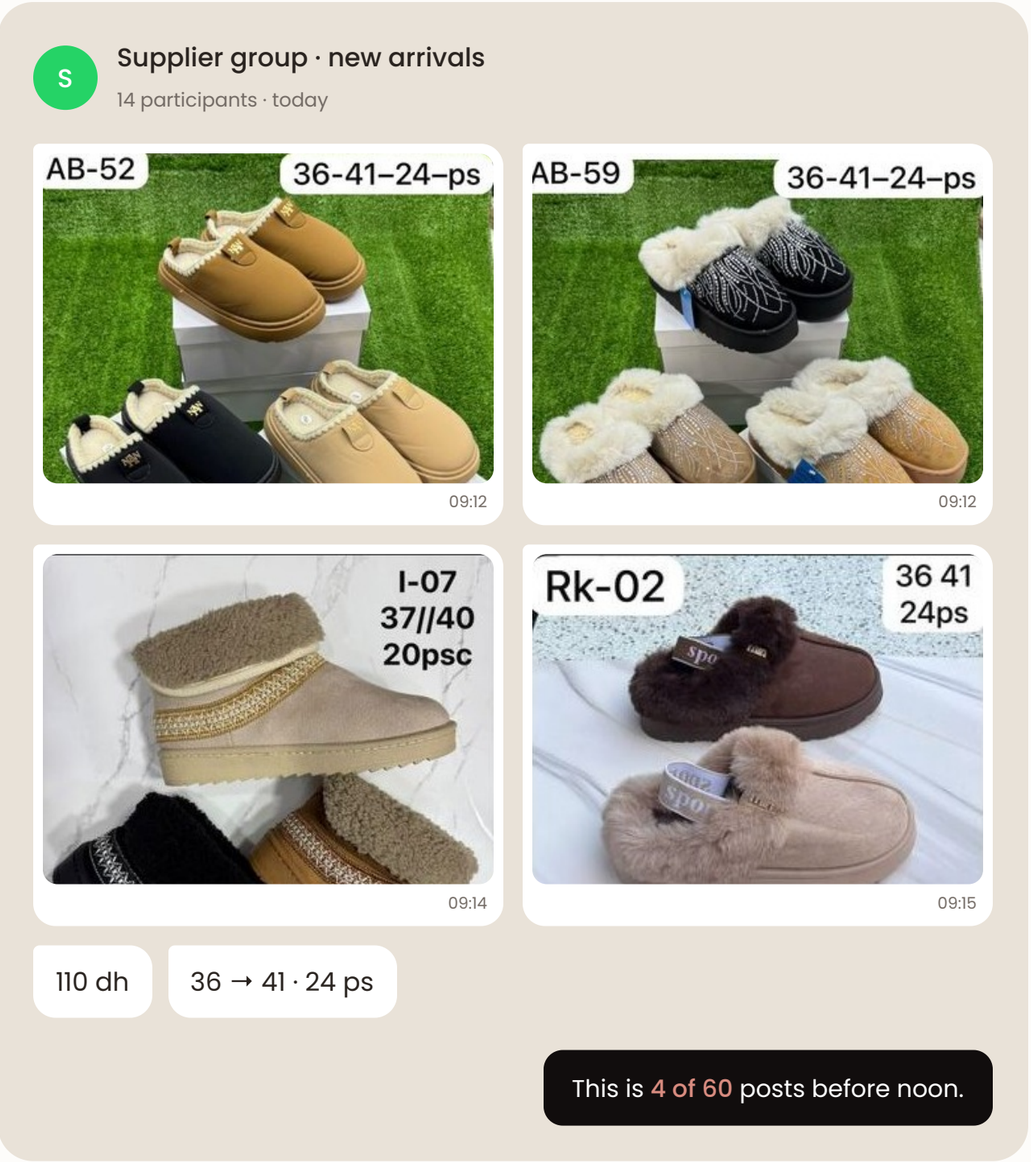

Thousands of products. Zero structure.

A wholesaler runs on a notebook, a phone and WhatsApp groups. Every new product arrives as a photo with a few numbers written on it.

01 **Offers drown in WhatsApp.**
Suppliers post dozens of photos a day. Prices come later, in another message.

02 **Orders come as voice notes.**
Someone has to listen, find the client, the reference and the quantity.

03 **Credit lives on paper.**
Who owes what, since when. One lost page is lost money.

02 / JMLA PRO

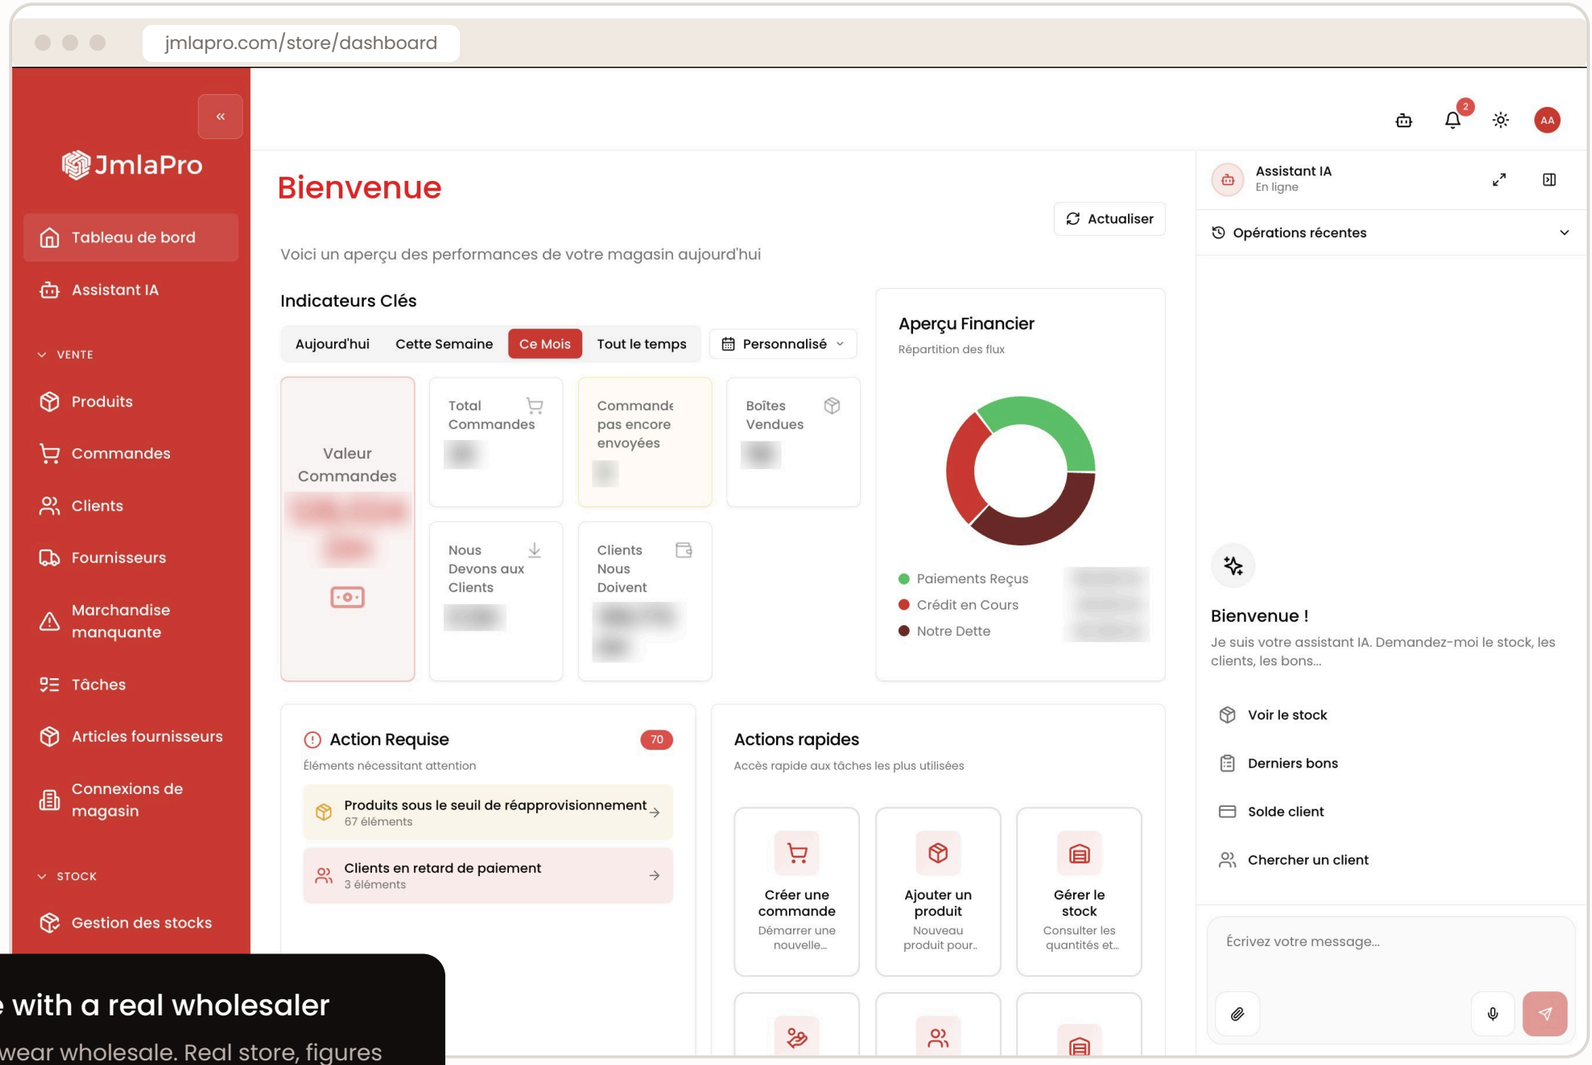

One app.
An AI inside.

Orders, stock by depot, client credit, cheques, suppliers and production. The AI assistant sits next to every screen.

Store Sell by box or piece, collect, follow every balance.

Depot Agents pick and hand over parcels from their phone.

Client Retailers order and track in their own portal.

Live with a real wholesaler

Footwear wholesale. Real store, figures blurred. The AI assistant is docked on the right.

03 / TWO LEVELS OF AI

It runs the day. It shapes the season.

Operational

The AI does the daily work

ASSISTANT

Voice note → order

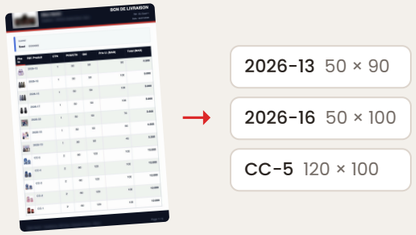

Any dialect, by voice or text.

AI STUDIO

Photo → poster

Branded catalogue images.

IMPORT

Delivery note → catalogue

Every line read and checked.

SUPPLIER OFFERS

Groups → offer list

Photos matched to prices.

Strategic

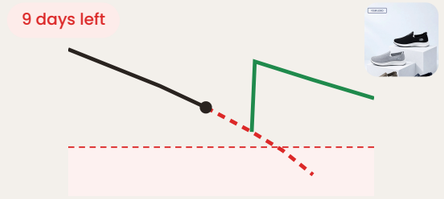

The AI helps the owner decide

MONTHLY REPORT

What to do next

A written review with actions.

STOCK PREDICTION

Never run out

Days of cover and reorders.

TREND RADAR

What will sell next

From suppliers and sales.

CLIENT INSIGHTS

Who to call today

Growth, risk, next product.

ⓘ **This deck highlights the main AI features.** Orders, stock, credit, cheques, warehouse and production are in the product guide. Part 2 shows features in development.

PART 1 · OPERATIONS

The AI does the daily work.

Orders, product photos, catalogue, supplier offers. The repetitive work that eats a wholesaler's day, done in seconds and confirmed in one tap.

04 / THE ASSISTANT

Send a voice note. Get an order and an invoice.

An assistant inside the app that understands voice notes and messages, reads the store's live data, and prepares orders, payments and invoices for the owner to confirm.

عطي لمحل النور 10 كولية ديال A230

"Give Al Nour store 10 boxes of A230" · voice note, 7 seconds

THE PROBLEM	BEFORE	WITH JMLA PRO
Orders arrive as voice notes and chat messages, in dialect, all day long.	Someone listens, finds the client, types every line, prices it, makes the invoice and sends it back.	One voice note. The order, stock reservation and invoice are prepared; the owner taps once to confirm.

Check stock · Client balance · Order details · Invoices · Store figures · Expenses · Suppliers

Create order · Record payment · Record expense · Adjust stock

05 / AI STUDIO · REAL RESULTS FROM A LIVE STORE

From a messy photo to a catalogue poster.

BEFORE · HOW PRODUCTS ARRIVE

Grass, cardboard, handwriting on the photo

AI STUDIO →

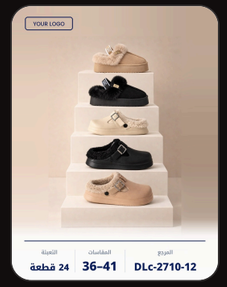

AFTER · WHAT THE STORE SHARES

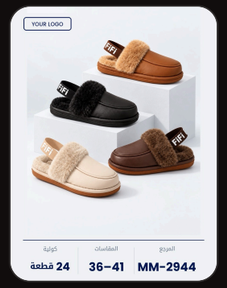

Podium quartet

Grouped products

Classic staircase

Four colours

Stacked trio

Brand colour

THE PROBLEM	BEFORE	WITH JMLA PRO
Products are sold from supplier photos: grass, cardboard boxes, handwriting on the picture.	A photographer and a designer per range, or messy photos sent as they are.	Pick the photos and a podium. A branded catalogue poster with logo, reference and sizes, in seconds.

06 / ONE TAP PER RANGE

Choose a podium. One tap.

Six compositions sized to the number of products: staircase, trio, four items, grouped, round and square, clean catalogue.

Bulk

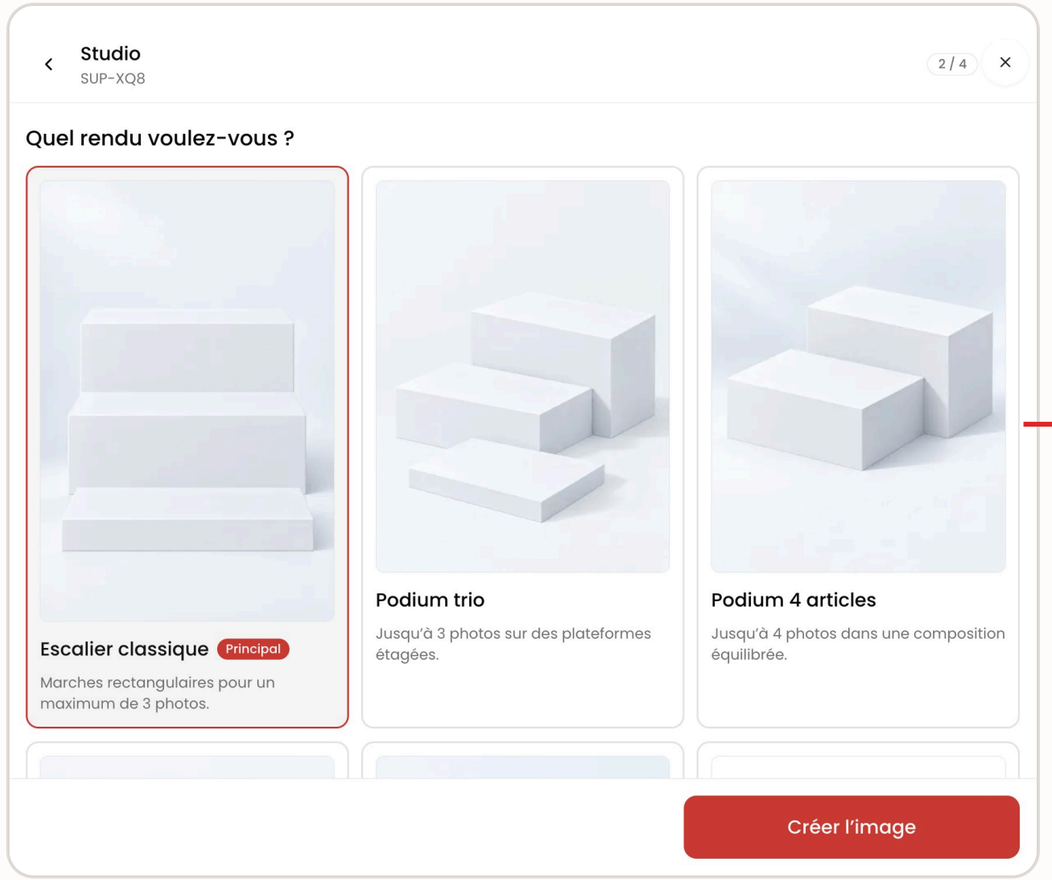

Select a whole range, generate, review on one page.

Cut-out, no AI

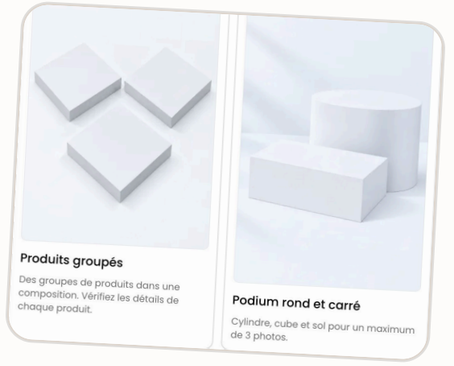

The real photo, cut out and set on a clean background with logo and facts. Free, nothing refused.

Review

Before and after side by side before anything is saved or shared.

07 / HOW A POSTER IS MADE

The AI places the product. The facts come from the store.

1. **Pick the photos and a podium.**
   One photo per colour. Six compositions, or select a whole range in bulk.

2. **The AI builds the scene.**
   The supplier's product is set on an approved podium, with real light and shadows.

3. **Code writes the label.**
   Logo, reference, sizes and pieces per box are drawn from the catalogue. Always exact.

4. **Review, then share.**
   Compare before and after, save to the product, send to clients on WhatsApp.

08 / GENERATED METADATA

One photo in. A full product sheet out.

THE PROBLEM	BEFORE	WITH JMLA PRO
A supplier photo comes with a reference and nothing else.	Names, colours, sizes and descriptions typed one by one, so most products go online with a bare reference.	The AI reads the photo and label and writes the full sheet in three languages, for one product or a whole arrival.

GENERATED BY AI · READY TO PUBLISH

TTM-NH228

NAME	**Kids' quilted winter slipper, faux-fur collar** شبشب شتوي للأطفال بفرو Chausson d'hiver enfant matelassé, col fourrure

buckle · fur lining · 5 colours

embroidered · platform

kids · boot · 28–33

09 / FROM A SUPPLIER LIST TO A CATALOGUE

Photograph the delivery note. The catalogue fills itself.

THE PROBLEM

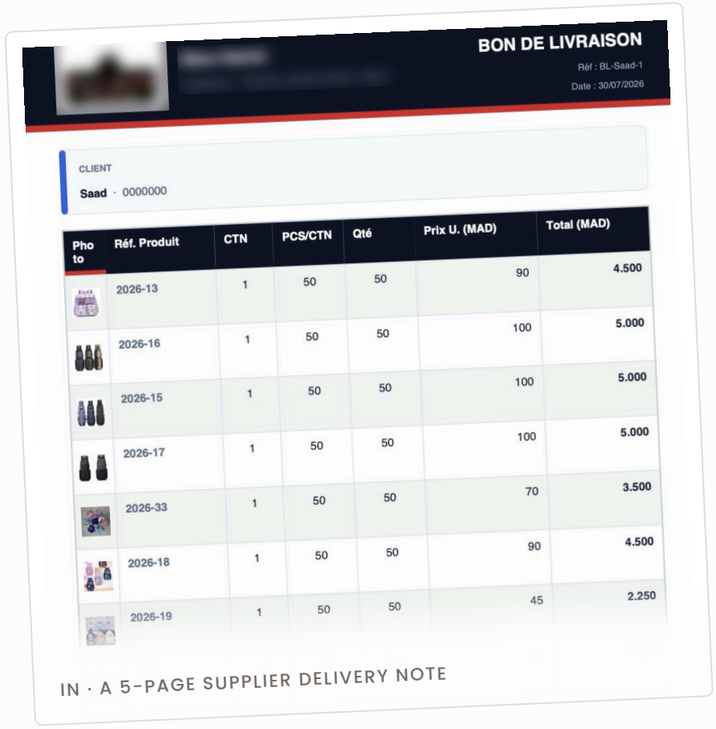

Every supplier sends a different document: photos, PDFs, handwritten lists.

BEFORE

Each line typed by hand: reference, cartons, pieces, price. Hours per delivery, and typing errors in stock and money.

WITH JMLA PRO

Take a photo. The AI reads every line and checks the maths. The merchant confirms and the products exist.

THE PROBLEM

Offers drown in groups.

Suppliers post dozens of photos a day. Prices come minutes later, sometimes from another phone.

BEFORE

Scroll, screenshot, guess.

The owner scrolls back through the group to find which price belongs to which photo, and misses half.

WITH JMLA PRO

One clean offer list.

Each photo is read once, matched to its price, de-duplicated when re-sent, and waits for one-tap approval.

WHAT IT IS

A watcher on supplier groups.

Connected to the store's WhatsApp supplier groups, it turns posts into priced offers.

11 / ON EVERY PHONE

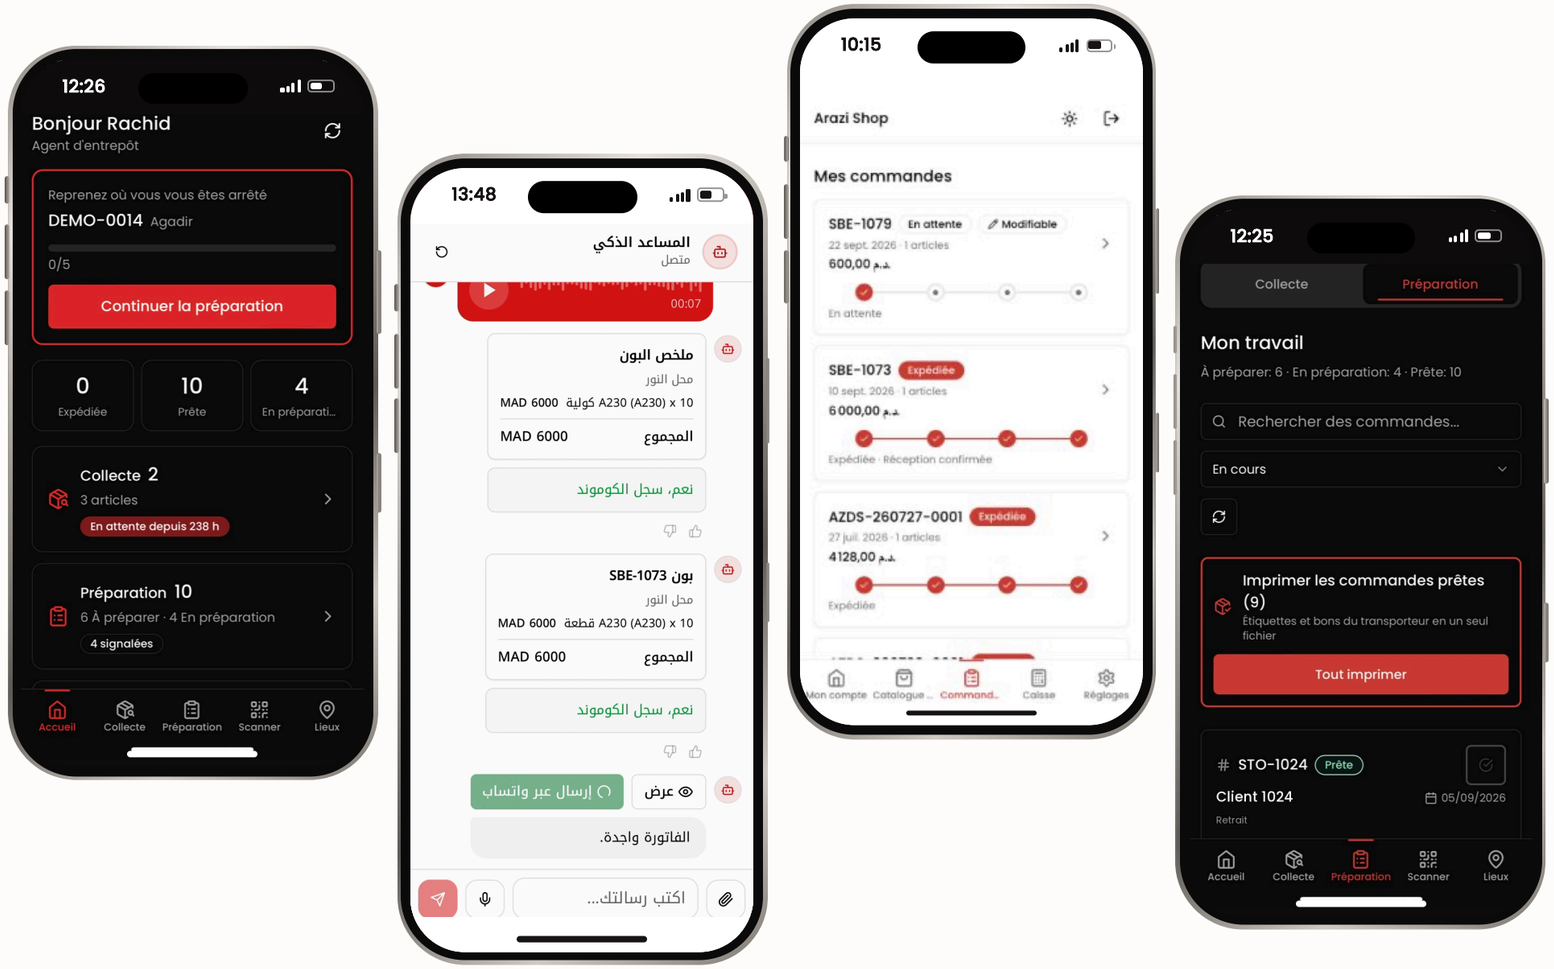

On Google Play and the App Store.

The full product in native Android and iOS apps, plus the web. The owner, the warehouse agent and the client each get their own space.

GET IT ON Google Play

Download on the App Store

Owner	Sales, credit, AI assistant and reports.
Depot agent	Collect, prepare, print and hand over.
Retail client	Order, follow, confirm reception.

PART 2 · STRATEGY

The AI helps the owner decide.

The same data that runs the day becomes foresight: what will sell, what to reorder, which trend to catch, which client to call.

12 / AI ANALYTICS & MONTHLY CONSULTING

Every month, a report that tells you what to do.

A monthly business review written by the AI from the store's own orders, payments, stock and supplier offers, plus answers to any question in between.

THE PROBLEM	BEFORE	WITH JMLA PRO
Owners run on gut feeling. The numbers exist but nobody has time to read them.	A notebook total at the end of the month, or an accountant's summary weeks later, with no advice.	On the 1st, a written report with ranked actions. Any question, any day, answered from live data.

Chnou li ma tba3ch had chhar?

Three references sold under 10 boxes in September: AB-59, I-07, 68B. You hold 46 boxes of them. I suggest a 5% price drop for your top 10 clients.

SALES
What moved, what didn't
Best and slowest references, by depot and by client.

CREDIT
Who to call first
Overdue clients ranked by amount and age.

STOCK
What to reorder
Restock alerts from real sales speed.

SUPPLIERS
Where margin hides
Price changes across supplier offers.

13 / PREDICTION

Know what will sell before you reorder.

NEXT BEST SELLER

MM-2944

Demand ×2.4 expected next month

STOCK-OUT RISK

SUP-XQ8 · 9 days left

SLOW MOVER

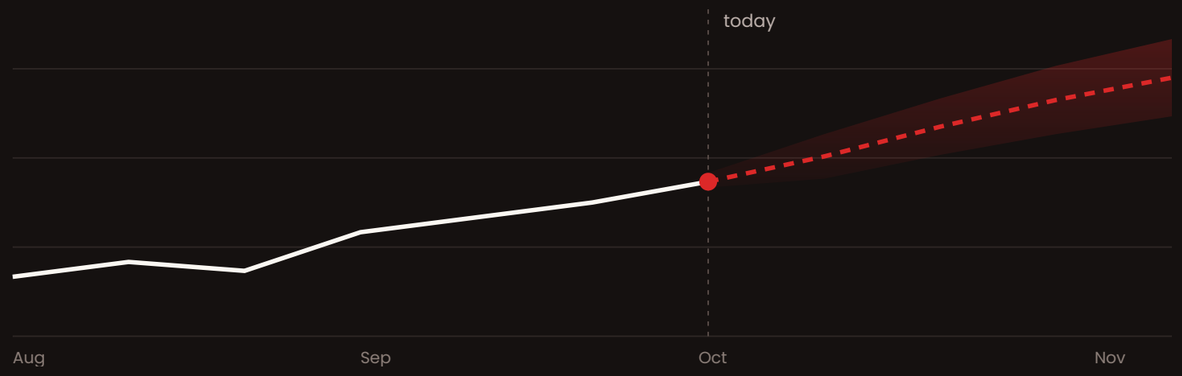

I-07 · push with -5 %

46 boxes idle for 5 weeks

DEMAND FORECAST · WINTER RANGE

EXAMPLE

+34 % in November

WHO WILL REORDER THIS WEEK

BN	Bazar Nour	88 %
KS	Kids Store	74 %
CA	Chaussures Amine	61 %

THE PROBLEM	BEFORE	WITH JMLA PRO
Buying is a bet: too much stock ties up cash, too little loses the season.	Reorder by memory and by what the supplier pushes this week.	The AI forecasts demand per product and client, flags stock-outs early and names who to call.

14 / STOCK PREDICTION

Reorder before the shelf is empty.

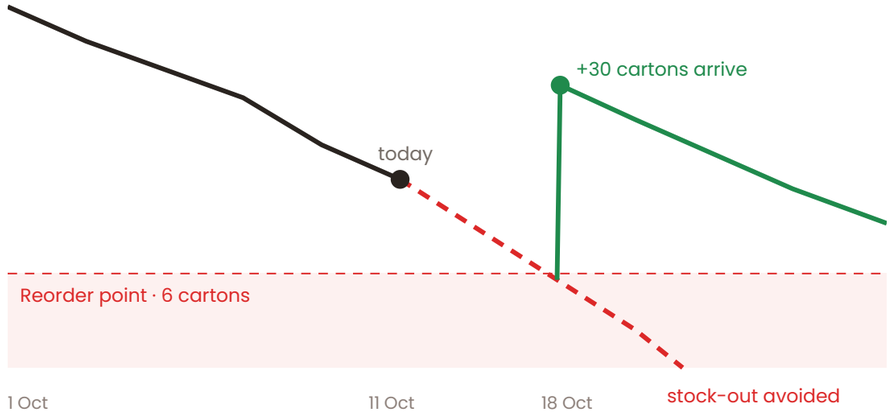

THE PROBLEM	BEFORE	WITH JMLA PRO
A stock-out in season is lost sales; overstock is cash asleep in the depot.	The owner walks the depot, counts boxes, and orders when something is already missing.	Each product gets its days of cover, a stock-out date and a suggested order, per depot.

	PRODUCT	ON HAND	DAYS LEFT	SUGGESTED ORDER
	SUP-XQ8	14 ctn	9 days	**30 cartons** · by 18 Oct
	MM-2944	22 ctn	16 days	**24 cartons** · by 25 Oct
	TTM-NH228	40 ctn	45 days	No order
	I-07	46 ctn	90+ days	Push, don't buy

SUP-XQ8 · PROJECTED STOCK

EXAMPLE

Runs out on 20 Oct

SUGGESTED ORDER

30 cartons · 20 pieces

Sent to the supplier as a purchase order in one tap

15 / NEXT TREND

See the next trend before the market does.

THE PROBLEM	BEFORE	WITH JMLA PRO
By the time a model is everywhere, the margin is gone.	The owner hears about a trend from a competitor, then buys late and expensive.	The AI reads what suppliers start posting and what sells fastest, and recommends what to source now.

RISING

Fur clogs with buckle

Supplier posts ×3 in 3 weeks · sells out in 4 days

RISING

Kids character slippers

Winter demand starts early · 3 clients asked

STEADY

Knit slip-ons

All-year seller · keep 3 weeks of cover

FADING

Embroidered boots

Fewer reorders · clear stock before buying more

✦

RECOMMENDATION · THIS WEEK

Source 20 cartons of fur clogs in 36–41 and offer them first to your 10 best clients.

EXAMPLE

16 / CLIENT INSIGHTS

Know every client like your best salesman.

THE PROBLEM	BEFORE	WITH JMLA PRO
Clients drift away quietly, and credit risk shows up only when a cheque bounces.	The owner remembers a few big clients; the rest are names in a notebook.	Every client is scored: growing, at risk, credit risk, and the next product they are likely to buy.

BN Bazar Nour

Client for 2 years

GROWING

Orders +40 % since August. Buys kids ranges first.

NEXT PRODUCT

TTM-NH228

KS Kids Store

Usually orders every 7 days

AT RISK

No order for 21 days. Last basket was smaller than usual.

WIN-BACK OFFER

MM-2944 · -5 %

CA Chaussures Amine

Balance 42 000 DH

CREDIT RISK

Payments 18 days later than his own terms, three months in a row.

SUGGESTED ACTION

Collect before the next order

MZ Magasin Zahra

New client, 3 orders

PROMISING

Same basket as Bazar Nour two years ago.

NEXT PRODUCT

SUP-XQ8

EXAMPLE CLIENT CARDS · NAMES ARE ILLUSTRATIVE

17 / EVERY LANGUAGE, EVERY DIALECT

It understands the way your market talks.

Wholesale talks in dialect, switches language mid-sentence and writes Arabic in Latin letters. The assistant follows all of it, by text or by voice.

الدارجة | مصري | خليجي | شامي | العربية | Français | English | + any language

Hamid | حميد | 7mid → same client

Cross-script search and Arabizi numerals. The assistant also learns each store's own words for its boxes and products.

01 **Nothing is written without a tap.**
Every order, payment or stock move shows a preview first. Approval expires in ten minutes and runs once.

02 **Money never comes from the AI.**
Prices and balances are recomputed from the database at the moment of writing.

03 **No guessing on names.**
Two close matches? The assistant asks with buttons.

04 **Roles fail closed.**
Each user only gets the tools their role allows. Every action is audited.

JMLA PRO

Wholesale, in hand. In any dialect.
